

My name is **Hisham Nabil Youssef**. I joined ALSondos Foundation for orphans with special needs in 2018/8/7. **I'm four Years now.**

Hisham suffers immature white matter in the brain, which leads to a motor delay.

He also suffers from deformity in the feet

(Clubfoot)

A levator tendon transfer of the left foot was performed

The plaster cast was done above the knee.

Now he can stand with help and needs follow-up at the orthopedic clinic.

His speaking skills developed, he understood words and movements were said to him, and he is able to imitate the movements.

Hisham still needs physical therapy sessions, speech and skill development

Hisham would like to say :

I love my surrogate mother '**manal**' so much she takes care of me a lot

My favorite color is red and my favorite fruit is apple

I love playing with the bounce rainbow spring ring and I love its colors.

Lastly I'm very thankful to be part of AISondos Foundation for Special Needs family, and thankful to all our sponsors.
